DETAILED ACTION

Response to Arguments

1. This office action is in response to applicant's response filed on 02/04/2008.
2. Claims 1, 7, 13 and 15 are amended.
3. Claims 1-19 have been considered.
4. Applicant's arguments are persuasive in the light of Applicant Amendment.

Therefore the rejections of claims have been withdrawn.

Allowable Subject Matter

1. Claims 1-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reasons for the allowance of the independent claims 1, 7, 13 and 15 are the inclusion of the following limitations that are not found in the prior art and they are uniquely distinct features. The closest prior art is Ishiguro et al. US Patent No 6,697,945. Ishiguro discloses a data transmitting apparatus wherein data is transmitted after predetermined processing based upon said apparatus' own ID code and an ID code received from partner apparatus has been carried out, said apparatus comprising: a signal receiving means for receiving a signal from a partner apparatus; a signal

Art Unit: 2134

transmitting means for transmitting a signal to a partner apparatus; and a signal encrypting means for carrying out predetermined encryption on a signal to be transmitted, wherein said signal encrypting means examines information indicating a signal transmitting source received from said signal receiving means and, if encrypted text generated by encrypting a session key is found already transmitted to said signal transmitting source, said encrypted text is not transmitted again to said signal transmitting source; whereby said ID code received from said partner apparatus is stored in a storage means while said session key is used for a current session, and said ID code received from said partner apparatus is deleted from said storage means when another session key is used for a next session; and whereby said session key is encrypted according to a license key that is generated by concatenating said ID code received from said partner apparatus with a service key unique to the data to be transmitted and applying a hash function to the concatenation.

However, this art, fail to anticipate or render the following limitation:

“Claims 1, 7, 13 and 15: a transmitter transmission/reception part which transmits a plurality of the key information, and then the encrypted contents data and a selection information regarding the key information used in the encryption of the contents data to be transmitted, wherein the key information, the encrypted contents data and the selection information are divided to be transmitted through a plurality of signal routes respectively, and

a receiver transmission/reception part which receives a plurality of the key information, the encrypted contents data and the selection information through [[a]] the plurality of signal routes, each of which are connected to the contents data transmitter;

a key information storage part which stores a plurality of the received key information;

a key information extraction part which extracts the key information used in the encryption of the contents data based on the selection information among a plurality of the key information stored in the key information storage part;

a contents decryption part which decrypts the encrypted contents data by using the key information extracted by the key information extraction part; and

an output part which outputs the contents data decrypted by the contents decryption part.”

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
